EDUCATION

PhD, Biostatistics

University of California, Los Angeles

Doctoral Candidate, Expected Graduation: June 2027

Los Angeles, CA

Sept. 2023 - Present

BS, Statistics and Data Science

University of California, Los Angeles

Los Angeles, CA

Sept. 2019 - July 2023

WORK EXPERIENCE

Early Development Biometrics Intern

Genentech

South San Francisco, CA

June 2026 - Present

- Retrospectively analyzed data from a clinical study using Bayesian dynamic borrowing methods to incorporate external control data into trial analysis
- Conducted simulation study evaluating effects of this borrowing framework on predictive probability of success as an interim monitoring statistic across scenarios of prior-data conflict
- Developing R Shiny application integrating historical efficacy data with dynamic trial monitoring to support an AI-enabled clinical trial monitoring pipeline
- Preparing manuscript synthesizing Bayesian external control methods with dynamic trial monitoring frameworks

Applied Math Graduate Researcher

Boeing Research & Technology

El Segundo, CA

June 2024 - Sept. 2025

- Developed statistical methodology recommendations for setting material allowables under a regulated industry consensus standard (CMH-17)
- Designed and validated variable acceptance sampling plans with controlled risk of failing to detect out-of-specification material, built into an interactive R Shiny tool
- Led statistical analysis of a multi-factor calibration study (temperature, instrument type) to quantify sources of measurement variability, with findings presented at an international technical forum

Graduate Student Researcher

UCLA Fielding School of Public Health

Los Angeles, CA

July 2023 - Present

- Developed novel Bayesian hierarchical modeling approach to detect health disparities across geographic regions
- Published methodological research on spatial confounding in multivariate areal models

Survey Statistician Intern

USDA National Agricultural Statistics Service

Sacramento, CA

June 2022 - Sept. 2022

- Applied and evaluated linear and time series regression models for production forecasting, comparing model performance to support official statistical estimates

Biostatistics Intern

USC Alzheimer's Therapeutic Research Institute

San Diego, CA

June 2021 - Aug. 2021

- Built automated reporting pipeline for pre-screening and recruitment data in the AHEAD Alzheimer's disease clinical trial
- Programmed CONSORT flow diagram in R for the A4 clinical trial, supporting standardized trial reporting

SELECTED PUBLICATIONS

- Wu, K., and Banerjee, S. (2025). Assessing spatial disparities: a Bayesian linear regression approach. *Biostatistics*, 26(1), kxaf048. <https://doi.org/10.1093/biostatistics/kxaf048>.

SKILLS

- Bayesian Dynamic Borrowing Methods, Clinical Trial Monitoring, Survival Analysis, Statistical Modeling
- Bayesian Inference, Hierarchical Models, Spatial Data Analysis, Neural Posterior Estimation
- R, Python
